AVG UI REFLECTION

376ms

Time for state to reflect after API call

Actions (47/47 successful)

Action-level metrics: API time is the request/response duration. UI reflection time is how long it took for the backend state (polled via API) to show the change. Status reflects real API errors only. Performance rates total duration against action-type-aware response-time tiers (hardware actions like camera zoom/preset recall get more lenient tiers than pure software actions).
