0 action failures, 15 network HTTP errors, 15 validation failures

ACTIONS

265/265

Actions completed successfully

AVG UI REFLECTION

235ms

Time for state to reflect after API call

Network Errors (15)

These are the failing requests behind the error count above. Each row is grouped by endpoint/status/message, with how many times it occurred and its average duration.

METHOD	ENDPOINT	STATUS	ERROR	COUNT	AVG DURATION (MS)
GET	localhost:10001/api/room/settings	401	HTTP error 401	15	259

Actions (265/265 successful)

Action-level metrics: API time is the request/response duration. UI reflection time is how long it took for the backend state (polled via API) to show the change. Status reflects real API errors only. Performance rates total duration against action-type-aware response-time tiers (hardware actions like camera zoom/preset recall get more lenient tiers than pure software actions). Endpoint(s) shows the exact API call(s) this action made, to speed up root-causing failures.
